

Follow everything you process, in real time

SIMBA Solutions automates plant flow, capturing data throughout your facility in real time. Always know exactly where your inventory is, where it's going and where it's been.

Quickly record raw materials entering the plant, then record each step towards finished goods as lots are divided, subdivided and channeled to different places – all while remaining traceable to their origins.

LABEL IT, Then Never Enter Data Again

At receiving, plant workers use simple, custom-designed software on touch-screen tablets or workstations to quickly enter raw material information, then print and affix a barcoded label to the box or bin, so it's easy to track from that point on.

TRACK IT, Even As Raw Material Becomes Multiple Products

As a raw product moves through your plant, SIMBA follows it in real time, following every piece of the item as you cut it into different products and lots. You'll always know exactly what you have, where it is, and what remains to sell.

TRACE IT, Showing Where Every Item Came From

Even after dividing raw materials into dozens of different products, you can trace every item back to its origins in seconds.

Throw away pen and paper.

Stop constantly updating spreadsheets.

SIMBA makes data entry at receiving fast and simple, keeping constant inventory records from that point forward, even as you divide material into different lots and products.

SIMBA is your complete, wireless, full-plant solution to labeling, inventory tracking, back-tracing, and ERP accounting integration.

SIMBA Grows With You

- Monitor production and yield by line, by day, by lot
- Print professional labels
- Create finished goods inventory on the fly
- Link with scales to record variable weights
- Provide finished goods inventory to salespeople
- Track inventory locations and movements
- Palletize individual cartons
- Ship by customer, by sales order and more
- Automatically create shipping manifests and bills of lading

Integrate With ERP

SIMBA can integrate with most popular accounting and Enterprise Resource Planning (ERP) systems like NetYield, QuickBooks, Sage and NetSuite. Know exactly what you bought, what it cost, what is committed to orders, what is left to sell, and what it all means to your bottom line.

Easy to Use, Easy to Learn

SIMBA grew from the Alaska seafood industry's need for quick, intuitive inventory tools that plant floor employees can easily learn, that managers can recall after long absences, yet that still meet the exacting traceability needs of a highly regulated industry.

Customized to Your Process

To speed data entry, SIMBA's screen buttons, fields and functions are configured to fit your process essentials.

An Affordable System That Scales

Priced within reach of small and mid-sized companies yet robust enough for large firms. Compatible with plant equipment from many manufacturers. SIMBA grows with you.
